

Agri-ecosystem QA cheat sheet — D0 → M4

Dev box quick reference · full walkthrough: docs/qa/manual-test-d23-d29.md · hardware checks: docs/qa/d29-device-matrix.md

Start the stack

Command	What
<code>docker compose -f docker-compose.dev.yml up -d</code>	API :8000, Postgres :5432, Redis, MinIO, workers
<code>pnpm --filter @agri/web-milk dev</code>	:3000 milk.in (consumer)
<code>pnpm --filter @agri/web-agri dev</code>	:3002 agri.in + vendor console
<code>pnpm --filter @agri/web-id dev</code>	:3003 identity hub (login/SSO)
<code>pnpm --filter @agri/web-admin dev</code>	:3004 staff admin
<code>scripts: load_geo.py → seed_e2e_milk.py → import_vendor_seed.py → seed_house_ads.py --enable-flag → seed_sample_media.py</code>	fresh-DB seeds (geo, vendor, 150+ dataset, image ads, product images) — run from backend/core with venv python

Accounts & test data

Item	Value	Notes
Consumer / staff login	+916374344282 (chan)	super_admin — works on :3004 too
Vendor login	+919000000023	owns "E2E Milk Vendor", covers 641001
OTP	printed in API console	dev peek enabled
Covered pincodes	641001 · 641002 · 641004 · 638051 · 636141	641001 = main demo pincode
Uncovered TN / non-TN	600001 / 110001	warm empty state / out-of-area state
Claimable brands	aavin · arokya · sakthi-dairy	ownerless seeds — claiming one consumes it
Advertiser UUID	019f8d1a-3c48-7968-9720-66b01da5a2f9	for :3004/ads "New campaign"

Foundation (D01–D05) — skeleton, design system, data, observability

URL / action	Data	Must happen
<code>:8000/health</code> · <code>:8000/health/deep</code>	—	<code>{"status": "ok"}</code> ; deep check also proves DB/Redis/MinIO wiring
<code>:8000/metrics</code>	—	Prometheus text (request counts, latencies) — D05 observability alive
All 5 apps boot	ports 3000–3004	each renders its shell with shared tokens — monorepo wiring (D01)
<code>:3002/demo</code> (+ <code>/demo/trace</code>)	—	D02 kitchen sink: every token/component, no raw hex, ≥44px targets, visible focus rings; trace page emits a Sentry test event
Immutable slugs (D03)	rename a business in the console	old profile URL 301s to the new slug — on milk.in AND agri.in
Geo foundation (D03)	pincode lookup on <code>:3003/account</code>	641001 → Coimbatore, TN; unknown pincode → clean not-found (needs <code>load_geo.py</code>)
Rate limiting (D30, but D01-era SecureRouter)	hammer any public URL ~30×	429s per-path, recovers after the window, other paths unaffected

milk.in — http://localhost:3000

URL	Data	Must happen
<code>/en</code>	—	image ad carousel (★ Sponsored), category tiles, pincode hero
<code>/en/coimbatore/641001</code>	<code>chips, ?product_category=ghee</code>	cards w/ product images, price banner, verified-first, chip filter
same + "Show map"	click pins/cards	pins at real coords; selection syncs both ways
<code>/en/641001</code>	—	301 → city URL
<code>/en/chennai/600001</code> · <code>/en/delhi/110001</code>	—	no-vendors / out-of-area warm states + Notify me
<code>/en/directory/businesses/e2e-milk-vendor</code>	logged out → in	out: "Login to view contact", no number in source, guest enquiry OK; in: reveal → Call/WA, cap at ~10/day, review form
<code>/en/directory/businesses/aavin</code>	also arokya, sakthi-dairy	brand page: products + "shops near you" + footer ad slot

/en/c/dairy-farm	also feed-supplier, cooperative, vet	category landing + covers browse + banner slot
/en/post-need	2L buffalo daily; try fresh phone as guest	guest OTP → posted; voice note records
/en/my-needs	after vendor reply	response shown → mark fulfilled
/ta/... · /hi/...	switcher	full translation, no layout breaks
/en/search	“milk”, typo “mlik”	typo-tolerant results; “load more” keeps locale
/sitemap.xml · /robots.txt	—	covered city URLs listed; robots → sitemap
PWA	DevTools → Application	installable, SW active, offline shell (prices + helpline), no PII in cache; push card in notifications

Vendor console — http://localhost:3002/business (login +919000000023)

URL	Data	Must happen
/business/listings	add pincode 641005	that pincode page lists vendor (~5 min ISR); remove → reverts
/business/products	“Fresh Paneer”, category paneer, ₹90	category REQUIRED; pending until /ops approves
/business/inbox	the posted need	type filter, voice note, respond → consumer notified
/business/analytics	—	views / reveals / leads by pincode
/business/premium · /business/billing	pick tier	“activate at launch”, no payment paths (flag dark)

Identity hub — http://localhost:3003

URL	Data	Must happen
/account	—	AG- id, handle (later change costs coins), language, pincode lookup
/devices	2nd browser session	revoke → other browser out; logout-everywhere kills all
/coins	approve own review in /ops	+coins ledger row (5/week cap), header pill updates
SSO	login :3000 → open :3001	already logged in (silent SSO)
/login	3 wrong OTPs	lockout UX, then recovery

Admin — http://localhost:3004 (login chan)

URL	Data	Must happen
/ads	advertiser UUID above, slot milk_home_hero , pincode 641001	pending creative NEVER renders; approve → serves with image
/ops	submitted review/product/report	approve → public; suspend a business → its profile 410 + ads stop; reinstate → back
/claims	claim on aavin	approve → claimant owns listing; reject needs reason
/users	search any user	phone LAST-4 only, role changes audited
/coins	manual adjustment	needs reason code, lands in user ledger
/businesses	—	tier is admin-set here (console only records intent)

M3 delivery + M4 tiers

Check	Data	Must happen
Global+local blend	2 campaigns: untargeted + 641001-targeted, same slot	both serve at 641001 (local ~2× oftener); only global elsewhere
Sponsored listings	milk_sponsored_listing placement	positions 1 & 6 only, max 2, ★ badge, organic order/count unchanged (pause vs active identical)
Category independence	ghee-targeted campaign	never appears on paneer pages
Recommended rail	—	organic-only label; paid units always ★ Sponsored, never “Recommended”
Delivery log	SELECT slot_key,pincode,reason FROM ads.delivery_decisions ORDER BY occurred_at DESC LIMIT 5	why-served rows, hashed session only

M4 tier load (branch)	<code>scripts/load_pincode_tiers.py</code> then <code>SELECT tier,count(*) FROM geo.pincode_tiers GROUP BY tier</code>	T1...T5 percentile spread; rerun = idempotent, history only on change; 641001 → T1/T2
--------------------------	--	---

Gotchas (not bugs)

Symptom	Cause / fix
Ad vanished after ~3 views	daily frequency cap — <code>seed_house_ads.py --reset-caps</code>
Data change not visible on public page	ISR ~5 min — delete <code>apps/web-milk/.next/cache/fetch-cache</code>
Impression beacon "missing"	fires only when slot scrolls into view (by design)
Empty pages / toasts failing on fresh DB	run the seed chain (top table)
641001 list shows only the E2E vendor	the 150-vendor seed covers the OTHER pincodes (636141, 638051, 641002/641004...) — use those for full marketplace pages
Server weird after crash	kill strays on ports 8000 / 3000-3003
